STORM PETRELS

The storm petrels are very small seabirds, engaging in frequent tussles with the waves. They are not typically seen around the coast, but are usually found in the open ocean. The males are smaller than the females. They are known for their aerobatic skills and can fly for hours without touching the water. The males have a cloister than the females during the mating season. The age range is typically 4-6 years.

OCEANIDAE

OCEANIC KITTY

The oceanic kitty is a small fish, typically found in the open ocean. They are known for their ability to swim for long periods of time without stopping. They have a cloister that is typically maintained for the first year of their life. The age range is typically 3-5 years.

56. GREY-BACKED STORM PETREL

Description:

The grey-backed storm petrel is a small seabird with a black back and white underparts. They are known for their aerobatic skills and can fly for hours without touching the water. They have a cloister that is typically maintained for the first year of their life. The age range is typically 4-6 years.

Plate 17

Identification:

Little grey-backed storm petrels are white underneath, with darker grey wings and a black back. They have a white eye-ring. They are known for their aerobatic skills and can fly for hours without touching the water. They have a cloister that is typically maintained for the first year of their life. The age range is typically 4-6 years.

Behavior:

Grey-backed storm petrels are known to nest in colonies on the coast, typically in burrows dug into the sand. They are known for their aerobatic skills and can fly for hours without touching the water. They have a cloister that is typically maintained for the first year of their life. The age range is typically 4-6 years.

Distribution:

Grey-backed storm petrels are found in the open ocean, typically in the southern hemisphere. They are known for their aerobatic skills and can fly for hours without touching the water. They have a cloister that is typically maintained for the first year of their life. The age range is typically 4-6 years.

Habitat:

Grey-backed storm petrels are typically found in the open ocean, away from the coast. They are known for their aerobatic skills and can fly for hours without touching the water. They have a cloister that is typically maintained for the first year of their life. The age range is typically 4-6 years.

Conservation:

Grey-backed storm petrels are not currently listed as threatened. They are known for their aerobatic skills and can fly for hours without touching the water. They have a cloister that is typically maintained for the first year of their life. The age range is typically 4-6 years.
